DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of copending Application No. 11/101,886. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims draw to a process for converting gaseous alkanes to liquid hydrocarbon by reacting the gaseous with bromine vapor. The copending claimed set does not specifically claim that the synthetic crystalline alumino-silicate catalyst is ZSM-5.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of copending claimed set by using ZSM-5 catalyst as a crystalline alumino-silicate catalyst because one of skill in the art would use any crystalline alumino-silicate catalyst including ZSM-5 with the expectation that any crystalline alumino-silicate catalyst would result in similar outcomes.

Art Unit: 1764

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

The argument that the instant application is the “earlier filed application” and as the ODP rejection is the only rejection of record, the need for filing a terminal disclaimer in the instant application is obviated and the ODP should be withdrawn is not persuasive because the later filed application (11/101,886) have not docket to me or even to the my Art Unit yet. Since the later filed application has not been examined, there is no way to know whether or not the later filed application is rejectable on other grounds. Moreover, even if the later filed application has been examined and it is rejectable on other grounds, a terminal disclaimer must be required in the later-filed application before the ODP rejection can be withdrawn. See M.P.E.P. §804 I.B.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1764

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
